

RuggON announces Rextorm PX501 with better performance

Taipei, Taiwan, February 27, 2019 – RuggON announced an enhanced edition Rextorm PX501 fully rugged tablet for challenging tasks. Besides the original model with the Intel 7th Generation Core™ i5-7300U, RuggON gives customers one more choice of processor– Intel 8th Generation Core™ i5-8250U– to ensure top performance with no compromise in the field.

“Voices from our customers matter!” said, Sean Lee, RuggON executive director. “We have gathered and acknowledged feedbacks from our clients in various domains and many have asked for an upgrade in system performance to increase their work efficiency; thus we proudly announce the release of a new CPU option with superior performance to meet the demand of our global partners and users.”

Like all its predecessors, the 3rd generation PX501 offers impenetrable rugged features together with exceptional viewing and touch experience. This new version is armed with a variety of unique features, including hyper dimming option to adapt to low ambient light conditions, hot-swappable battery with fast charging function, a huge range of accessories, and an extensive selection of peripherals to meet various requirements of different applications.

“Ruggon’s core values not only aim to provide rapid customization, but to service worldwide customer based,” said Sean Lee, RuggON executive director. “Once you start working with Ruggon, we promise, you would never want to turn your heads away! That is our customer-oriented company culture and all-round service business philosophy.”
